Explanation of Verifications

Document

We validate that the provided driver's license, photo ID, or passport is an actual identification document. We do this by checking for the presence of unique identifiers, such as barcodes, holograms, and other identifiers specific to identity-type documents.

Trusted Source

We validate the authenticity of the document with the respective participating state government agency, of which 41 state government agencies participate and more are in preparations to participate.

Liveness

We validate that the individual sharing the document is a live person by capturing two selfies and using our TurboAIEngine™ to determine if the captured selfies are of a live person or a potential capture of another photo.

Face Match

Using advanced face-matching technology with our TurboAIEngine™, we meticulously compare selfies with identity document images, ensuring unparalleled accuracy in detecting differences and inconsistencies.
